
Press release

April 2005

Schneider Electric's five-step RoHS program

Schneider Electric has launched an RoHS deployment program that will apply to all products covered by the Directive. It comprises five key steps:

- 1st step: Identify solutions to adapt or substitute components and materials both in house and with suppliers.
- 2nd step: Certify all suppliers.
- 3rd step: Validate modified products.
- 4th step: Apply action plans to ensure quality and reliability.
- 5th step: Launch new production and market new products.

General Management considers this program a priority, as a tangible application of Schneider Electric's environmental policy and commitment to sustainable development. It concerns all processes and all units. The Scientific & Technical Affairs and Manufacturing Departments are leading the process together and are responsible for supplying and industrializing alternative technical solutions.
